FACT SHEET

SELCOPLUS

SelcoPlus is a highly palatable moist feed with a distinctive fresh aroma and a golden brown colour. SelcoPlus contains co-products from the processing of cereals and distilling. SelcoPlus is high in energy and protein content and contains moderate amounts of starch and sugar. The protein is from both distillery and cereal co-products and has a balanced amino acid profile. The nutritional composition makes SelcoPlus especially suitable when used in grass silage based rations for dairy cows. A high performance moist feed designed to boost milk yield and quality.

SelcoPlus can be fed alongside silage or other forage stocks and the higher dry matter of the product means that less needs to be fed in comparison to traditional moist co-products. SelcoPlus is an excellent feed for beef stores or growers as it has a good level of protein and energy which could benefit frame growth *and can ideally be mixed with silage or stow. SelcoPlus is suited to any PMR or TMR based diet, as it mixed well with forage, improving the open structure and reducing sorting from the overall mix. Vitamin and mineral supplementation should always be offered.*

Inclusion Rate. Dairy Feed up to 12 kg/head/day

TYPICAL NUTRITIONAL VALUE OF SELCOPLUS

Dry Matter %	46.00	Crude Protein %*	18.50
Energy (Mj/kg)*	13.40	Oil (B) %*	6.10
Crude Fibre %*	5.60	NDF %*	20.00
Starch %*	17.00	Sugar %*	9.00

*expressed in the dry matter
